

Saver Trailer

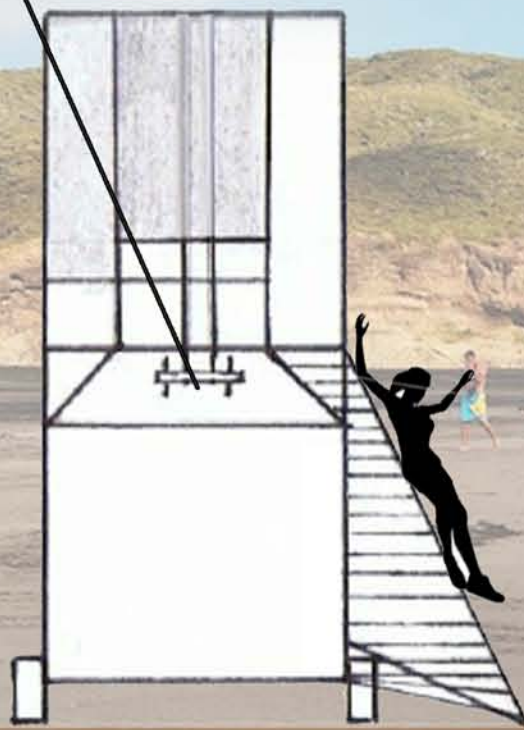

The Saver Trailer is an innovative mobile lifesaving tower, which focuses on mobility along and between beaches. The viewing platform, two and a half metres high, can be erected, becoming an enclosed or open platform for two lifeguards. A simple pull/push movement of the middle pole erects and supports the tower which collapses down for transporting/storing. PVC (polyvinyl chloride) clear blinds protect from the rain and wind without compromising observation, while sunny days the attached shaded material protects the guards from sunrays, and can also be rolled up, to any height, to allow air flow. One side of the trailer folds out to create a canvas slide and rope ladder for a quick descent and access to the tower, while the back folds down to create access to the storage within the trailer.
